

API Security & Anomaly Inspection Report

Target Base URL:	http://example-target.org
Session ID:	#999
Scan Date:	2026-09-18 08:21:43.575779
Overall Risk Score:	55.5 / 100
Overall Severity:	Medium
Total Endpoints Tested:	2
Vulnerabilities Found:	1

Executive Summary

This inspection report summarizes telemetry security findings for **http://example-target.org**. The scanner evaluated target endpoints across three independent detection layers: Layer 1 (Signature Rules), Layer 2 (Isolation Forest ML Anomaly), and Layer 3 (PyTorch LSTM + Autoencoder DL). Overall risk severity is assessed as **Medium** with a composite score of **55.5/100**.

Vulnerability & Anomaly Findings

Endpoint	Attack Type	Severity	Score	Recommendation
http://example-target.org/api	Security_Misconfiguration	Medium	55.5	Enforce strict CSP and frame options.

Detection Methodology

- Layer 1 (Signature Engine):** Performs deterministic regex matching on URLs, parameters, headers, and responses.
- Layer 2 (Machine Learning):** Analyzes the defined HTTP telemetry feature schema (17 features) using an Isolation Forest model trained on HTTP CSIC datasets.
- Layer 3 (Deep Learning):** Combines character-level LSTM sequence classification with PyTorch Autoencoder feature reconstruction error benchmarking.
